

08. PAYMENT GATEWAYS, SECURITY & TRANSACTION TROUBLESHOOTING

DOCUMENT ID: KB-DOC-008	VERSION: 1.0	STATUS: ACTIVE
CATEGORY: PAYMENTS	EFFECTIVE: October 2026	LANGUAGE: English (EN)
OWNER: Store Policy & Operations Governance	CLASSIFICATION: Authoritative Public Policy	GROUNDING: Strict RAG Retrieval

1. Supported Payment Methods

[STORE_NAME] partners with leading secure payment gateways (Razorpay, Stripe) supporting comprehensive payment channels:

- Unified Payments Interface (UPI): Instant checkout via Google Pay, PhonePe, Paytm, CRED, BHIM, and bank UPI apps.
- Credit & Debit Cards: Visa, MasterCard, American Express, RuPay, and Diners Club International.
- Internet Banking: Direct net banking support for 50+ major retail and commercial banks.
- Digital Wallets: Paytm Wallet, PhonePe Wallet, MobiKwik, and Amazon Pay.
- Cash on Delivery (COD): Permitted based on store policy [COD_AVAILABLE] for eligible domestic pincodes.

2. Resolving Payment Failures & Deducted Amounts

If money is deducted from your bank account but your order status indicates 'FAILED' or 'PENDING':

- Root Cause: This occurs when an intermittent network timeout interrupts communication between your bank and our gateway.
- Auto-Reversal: Banking regulations mandate an automatic reconciliation. If our gateway does not receive the funds, your bank will auto-refund the deducted sum to your account within 24 to 48 hours.
- Customer Support Verification: If funds are not restored after 48 hours, send your bank transaction UTR/reference number to [SUPPORT_EMAIL].

3. Payment Security & Data Privacy

All transactions are secured with 256-bit SSL encryption and strict PCI-DSS Level 1 compliance. [STORE_NAME] never stores complete credit/debit card numbers or CVV codes on our servers.

KNOWLEDGE BASE NOTICE & RETRIEVAL BOUNDARIES: This document is an authoritative policy reference intended for grounding our store AI/RAG assistant. Store policies, shipping charges, return periods, and operational terms are governed by active store settings. Dynamic customer data—including live product prices, real-time variant inventory, order shipment tracking, user profile addresses, and coupon code validity—must ALWAYS be resolved via live PostgreSQL application database APIs rather than static document text. If information is not covered within this knowledge base, the chatbot must clearly state that the information is unavailable and offer customer support assistance.
