

03. PRODUCT INFORMATION & CATALOG ARCHITECTURE

DOCUMENT ID: KB-DOC-003	VERSION: 1.0	STATUS: ACTIVE
CATEGORY: PRODUCT_DETAILS	EFFECTIVE: October 2026	LANGUAGE: English (EN)
OWNER: Store Policy & Operations Governance	CLASSIFICATION: Authoritative Public Policy	GROUNDING: Strict RAG Retrieval

1. Product Catalog Schema & Attribute Definitions

Every garment in the [STORE_NAME] catalog adheres to a rigorous standardized schema ensuring consistent product transparency:

- Product Display Name: Official descriptive product title (e.g., 'Men's Heavyweight Relaxed Crewneck Tee').
- Master Category: Top-level classification (Apparel, Footwear, Accessories, Personal Care).
- Subcategory & Article Type: Specific garment category (e.g., Topwear → T-Shirts, Bottomwear → Trousers).
- Gender Classification: Categorized as Men, Women, or Unisex.
- Base Colour: Primary garment shade (e.g., Black, Optical White, Heather Charcoal, Navy, Olive).
- Material & Fabric Composition: Exact yarn construction (e.g., '100% Combed Compact Cotton, 260 GSM Heavyweight Jersey').
- Fit Silhouette: Cut classification (Slim Fit, Regular Fit, Relaxed Fit, Oversized Boxy Fit).
- Stock Keeping Unit (SKU): Globally unique alpha-numeric identifier mapped directly to individual size/color combinations.

2. Static Knowledge vs Live Database Data (Critical RAG Boundary)

The AI Chatbot MUST strictly distinguish between static catalog descriptions and dynamic database information:

Information Type	Authoritative Source	Chatbot Retrieval Mechanism
Fabric, Materials & Cut	Static Knowledge Base (PDF)	Direct RAG vector similarity retrieval
Fit & Styling Recommendations	Static Knowledge Base (PDF)	Direct RAG vector similarity retrieval
Garment Care Protocols	Static Knowledge Base (PDF)	Direct RAG vector similarity retrieval
Current Product Retail Price	PostgreSQL Product Database	Live Spring Boot REST API query (/api/products)
Real-Time Stock Availability	PostgreSQL Inventory Database	Live Spring Boot REST API query (/api/products/search)
Active Discount Percentages	PostgreSQL Promotion Engine	Live Spring Boot REST API query (/api/coupons)

ANTI-HALLUCINATION RULE: The chatbot must NEVER quote live inventory quantities or current selling prices from outdated PDF text. Live numbers must always originate from PostgreSQL.

KNOWLEDGE BASE NOTICE & RETRIEVAL BOUNDARIES: This document is an authoritative policy reference intended for grounding our store AI/RAG assistant. Store policies, shipping charges, return periods, and operational terms are governed by active store settings. Dynamic customer data—including live product prices, real-time variant inventory, order shipment tracking, user profile addresses, and coupon code validity—must ALWAYS be resolved via live PostgreSQL application database APIs rather than static document text. If information is not covered within this knowledge base, the chatbot must clearly state that the information is unavailable and offer customer support assistance.
